

PART B — QUESTION 1: ADVANCED SOURCING METHODS

To build a high-yield, high-quality universe of 'Federer' companies across India beyond basic Google searches, I will leverage these specific institutional and regulatory data channels:

1. DSIR-Recognized R&D Units List (Department of Scientific and Industrial Research)

- Why it works: Directly maps to C3 (Differentiation) and C4 (Decision-Maker Quality). Companies that successfully clear government audits for in-house R&D units are inherently technical producers investing deeply in specialized capabilities, rather than commodity traders.

- Limitations: Skews slightly towards older, well-established firms. It can occasionally miss highly agile, newer startups that have not yet applied for formal DSIR recognition.

2. Industry-Specific Trade Expo Exhibitor Directories (e.g., CPHI India, BioAsia, IMTEX, ELECRAMA)

- Why it works: Directly signals C6 (Active Growth) and E1 (Producer). Investing Rs. 2L–10L on a physical exhibition booth heavily correlates with active market expansion, new product launches, and strong commercial intent.

- Limitations: Biased toward companies with dedicated marketing budgets. It may overlook bootstrapped or highly niche B2B MSMEs that rely entirely on quiet word-of-mouth contracts.

3. BSE SME / NSE Emerge Listed Cluster Master Data

- Why it works: Offers immediate, fully verified visibility into exact financial revenue bands (Rs. 50Cr–500Cr), ownership frameworks, and multi-year growth curves. Annual regulatory filings also cleanly lay out executive profiles for C4/C8 profiling.

- Limitations: Restrained purely to companies that have transitioned to the public markets, completely missing the vast majority of private, promoter-held MSMEs matching our target segment.

4. Global Regulatory Approvals & Facility Lists (USFDA / EU-GMP / WHO-GMP Prequalification logs)

- Why it works: Absolute validation of E1 (Producer) and C3 (Differentiation). Commodity factories or distributors cannot secure these stringent global certifications. It validates a high-margin, export-oriented infrastructure tailwind (C5).

- Limitations: Heavily over-indexed toward the pharmaceutical, chemical synthesis, and medical device sectors. It does not provide significant coverage for precision engineering, aerospace, or agri-tech.

PART B — QUESTION 2: THE 1000-COMPANY PROPOSAL (EXECUTIVE SUMMARY)

To successfully establish a highly qualified database of 1000 'Federer' companies in 30 calendar days while maintaining flawless data discipline, I will implement a multi-tiered automated pipeline using a ~30% expected yield model (requiring a raw sourcing universe of 3,500–4,000 entities).

* Sourcing Phase: Week 1 will be purely dedicated to pulling unstructured, raw cluster data (company name, city, website domain) across the 4 primary channels detailed above.

* Automated AI Screening Pipeline: In Weeks 2–3, I will deploy an automated script (utilizing Python + Playwright for web scraping) to gather text from the homepage, /about, /products, and /management subpages up to an 8k token limit.

* Two-Tier LLM Evaluation:

- First-pass scoring will use Claude Haiku to parse the raw text against our core gates (E1/E2) and assign a programmatic JSON score. This keeps compute costs highly optimized (~Rs. 0.40 per company).

- Borderline cases or low-confidence records scoring between 40-48 will be automatically routed to Claude Sonnet for deep contextual reasoning.

* Rigorous Quality Control: In Week 4, algorithmic flags will filter out false positives (e.g., LLMs confusing baseline ISO 9001 labels with authentic technical differentiation). A targeted manual review (allotting 3-4 minutes per flagged profile) will refine the borderline cases, finalizing a strict list of 1000 validated targets complete with personalized outbound email hooks.

[STEP 1: SOURCING UNIVERSE (Week 1)]

(3,500 - 4,000 Companies)

- ↳ [DSIR R&D Units]
- ↳ [Expo Directories]
- ↳ [BSE SME Lists]
- ↳ [USFDA Facility Logs]

[STEP 2: HARD PRE-FILTERS] --- (Drop Traders & Conglomerates) → [FAIL LIST]

[STEP 3: AUTOMATED SCRAPER (Week 2)]

- ↳ Playwright Scripts (Homepage, /About, /Products, /Management)

[STEP 4: TWO-TIER AI SCORING (Week 3)]

[CLAUDE HAIKU]

First-Pass JSON
(Gates E1 / E2)

[CLAUDE SONNET]

Borderline Re-score
(Score: 40 - 48)

[STEP 5: RIGOROUS QUALITY CONTROL (Week 4)]

- ↳ Algorithmic Flags (Catches false ISO 9001 "differentiation")
- ↳ Human QA (3-4 mins manual check per flagged profile)

[OUTPUT: 1,000 VERIFIED 'FEDERER' COMPANIES]

- ↳ Master CSV + Top 200 Personalization Hooks

TITLE: FEDERER COMPANY PROFILING PIPELINE

DWG NO: FCPP-001 / REV A
